DEVELOPER HANDOFF / 17 OCTOBER 2026

ScaleSight website revamp

Prepared for Wahib | Strategy, content, design and implementation specification

From a planning-system website to a managed analytical planning service.

The new website should help a consumer-brand founder or operations leader understand what ScaleSight investigates, what recommendation they receive, and how to test the approach on one upcoming commitment.

The governing message

We connect demand, inventory and incoming supply to weekly, specialist-reviewed recommendations on quantity, timing and cash.

Analysis maintained by ScaleSight. Decisions made with the client.

What this document contains

• A fresh review of all five discoverable public content pages and their linked journeys.

• A complete replacement plan for seven proposed pages, with section IDs, publishable copy, visuals and CTA routes.

• A reusable planning-brief specification, form behavior, SEO, migration, QA and staged delivery requirements.

Status: implementation brief for staging. Service promises, commercial terms and named-demo publication require the approvals recorded on page 26. No production deployment is authorized by this handoff.

01 / HOW TO USE THIS BRIEF

Scope, decisions and reading map

Pages	Contents
3-5	Research scope, audit and section migration
6-7	Positioning, information architecture and shared navigation
8-10	Home: all replacement sections and sample brief
11-12	How we work: inputs, process, ownership and FAQ
13-15	30-day pilot: scope, schedule, deliverables and terms
16-17	Illustrative examples: disclosure, exact cards and demo rules
18	About: founder narrative and credibility
19	Partners: conditional page and partnership enquiry
20-21	Contact: copy, fields, validation and booking states
22-23	Visual system, components and metadata
24-25	Build sequence, QA, redirects and measurement
26-27	Approval register and source notes

Instruction conventions

• COPY identifies intended website wording. It is ready for layout, subject to the approval register.

• BUILD identifies developer requirements. These must not appear as customer-facing text.

• Current sections are locators, not requirements to preserve the existing page structure.

• Proposed defaults settle routine choices now. Open operational facts are listed explicitly; never fill them with invented promises.

What the project does not include

No demo rebuild, client portal, automated ordering, new native integration, new CRM, paid media, rebrand or stack migration is included. Keep the current implementation unless repository inspection shows a concrete blocker. The website is the marketing and enquiry layer.

02 / RESEARCH

What was reviewed and what remains untested

Research date: 17 October 2026. The supplied prompt was read in full and reconciled with the ScaleSight master brief and 9 October commercial update.

Reviewed URL	Finding / evidence status
www.scalesight.org/	Full extracted homepage content reviewed.
www.scalesight.org/30-day-planning-pilot	Full extracted pilot content reviewed; reached through homepage link.
www.scalesight.org/about	Full extracted About content reviewed; reached through homepage link.
www.scalesight.org/partners	Full extracted Partners content reviewed; reached through homepage link.
www.scalesight.org/contact	Full extracted Contact content and displayed form reviewed; reached through primary CTA.

Coverage boundary

These are all five unique content pages listed in the retrieved navigation, footer and XML sitemap. Inventory Planning and Revenue Forecasting both resolve to the pilot URL. They are link labels, not separately reviewed service pages. Proposed How we work and Examples pages are new in this plan.

Direct HTTP retrieval confirmed robots.txt and sitemap.xml return 200. The sitemap lists exactly the same five pages, using the non-www host. The research tool could not retrieve /how-we-work, /examples or /privacy; this alone does not establish their HTTP status. Wahib must still inventory codebase/CMS routes before redirects or deletions.

Demo URLs supplied in the prompt could not be retrieved in this session. Their intended narratives are preserved, but live screens, deep links and disclosures require manual verification. No enquiry was submitted and no appointment was booked. Form delivery, calendar behavior, security controls, analytics and mobile rendering were not tested.

External research used

Cin7 official product messaging confirms that inventory software can include forecasting and purchasing guidance. The site must respect existing capability. W3C form guidance informs labels, instructions, validation and notifications; Google Web Vitals guidance informs performance targets. Sources and exact URLs are on page 27.

03 / CURRENT-SITE AUDIT

What must change on each existing page

Page	Observed issue	Required direction
Home	Shopify-specific audience; large dashboard-led product story; broad system-build promises.	Lead with consumer-brand commitments and the reviewed recommendation. Replace the feature gallery with one clear decision brief.
Pilot	Whole-system delivery and handover dominate a long, repetitive page. Qualification emphasizes DTC and advertising.	One scoped decision; explain inputs, analysis, weekly review, ownership and continuation.
About	Monitoring and early-warning claims replace a concrete founder story and service explanation.	Explain why Arman created the service, how analysis and planning review connect, and how client ownership works.
Partners	Broad agency story; continuous monitoring and strong commercial/quality promises lack visible substantiation.	Keep only if the channel is active. Offer scoped analytical support and explicit relationship boundaries.
Contact	Pilot-first framing, generic challenge selection, revenue gate, and two different email addresses appear.	Ask about the upcoming decision. Confirm one canonical address and separate enquiry success from booking success.
Shared footer	Product labels point to the same pilot page and repeat narrow audience language.	Use Service links with accurate destinations and one consistent service description.

Priority order

P0: positioning, unsupported claims, contact identity, forms and broken/misleading destinations.
P1: complete page copy, brief visual, examples, metadata, responsive/accessibility QA.
P2: partner expansion, additional vertical pages and measurement refinements after the core journey works.

Existing sections: keep, replace, merge or remove

Existing location	Action / target
Home hero + Shopify strip	Replace with H01 consumer-brand hero and readable brief.
Home problem grid	Replace with H02 three decision tensions.
Home process + pilot weeks	Shorten into H03 service flow and H07 pilot CTA. Full process moves to How we work and Pilot.
Home deliverables + workspace gallery	Merge into H04 maintained brief; example links belong in H06.
Home transformation + business impact + comparison	Remove repeated before/after and generic competitor framing. Replace with H05 fit and ownership.
Home continuation + FAQ + final CTA	Use H07-H09. No automatic ongoing access promise.
Pilot audience + pain + process	Replace with P02 fit and P03 focused four-week path.
Pilot deliverable lists + five dashboard images + workspace tabs	Merge into P04 output list and one scoped brief preview.
Pilot weekly questions + system/service + commitments + comparisons + outcomes	Replace with P05 responsibilities and P06 evaluation. Delete repeated benefits and unsupported outcome language.
Pilot continuation + FAQ + CTA	Replace with P07-P09 with explicit continuation-by-agreement.
About mission + internal positioning quote + four commitments	Replace with A01-A04. Internal strategy language is not website copy.
Partners all sections	Replace with R01-R06 if retained; otherwise remove navigation and redirect after route review.
Contact hero + expectations + form + calendar + email	Replace with C01-C05 and the state specification on page 21.

Wahib: Remove superseded copy from hidden tabs, mobile-only elements, metadata, image text and alt text. Updating visible headings alone will leave the old proposition in the site.

The positioning every page must preserve

Audience and category language

Use “growing consumer brands” as the umbrella. Examples include food/CPG, beverages and RTD, apparel and underwear, beauty, household and pet brands. CPG, RTD and apparel are useful recognition cues; they are not a rigid or mutually exclusive taxonomy. Keep the short category line from the supplied prompt, and explain the broader fit in body copy.

Service chain

Agreed sales, inventory and incoming-supply inputs → forecasts and investigation appropriate to the question → option comparison → specialist planning review → recurring decision brief → client decision and execution.

Buyer situation	Website treatment
Existing team and systems	Lead with additional analytical bandwidth around selected exceptions and commitments. A planner or ERP does not disqualify the buyer.
Lean planning capability	Explain access to maintained analysis and review without immediately building every capability internally.
Narrow specialist need	Offer a focused investigation where a specific decision warrants it. Avoid a universal department-replacement promise.

Commercial treatment

Internal reference: standard managed planning concept is US$2,000/month for defined scope. This is not an approved universal quote or pilot price. Default build: no public price table. Use the pricing FAQ on page 15. Add an exact price only after Arman confirms scope, currency, pilot fee, continuation and exclusions.

Language rules

Use concrete actions: buy, produce, replenish, hold, reallocate, split, investigate. Describe quantity, timing, service and cash trade-offs. Do not present dashboards as the purchased product, infer that all clients need ML, claim dedicated full-time staff, or dismiss existing planning tools as charts only.

06 / ARCHITECTURE

Routes, navigation and conversion journeys

Route	Status	Purpose / principal destination
/	Rewrite	Explain service → /examples/#sample-brief
/how-we-work	New	Explain managed process → /contact
/30-day-planning-pilot	Rewrite, retain URL	Explain scoped test → /contact?intent=pilot
/examples	New	Show illustrative decision logic → /contact?intent=planning
/about	Rewrite	Build founder credibility → /contact
/partners	Conditional rewrite	Partner enquiry → /contact?intent=partner
/contact	Rewrite	Capture enquiry and offer booking
/privacy	Verify or create after owner approval	Accurate notice for actual enquiry/analytics tools

HEADER

How we work | Examples | 30-day pilot | About
Button: Talk through a decision

Wahib: Logo links to /. Use /contact for the header button. Partners belongs in the footer unless the channel becomes a priority. Mobile menu uses the same order, closes after selection and exposes aria-expanded. Keep the contact CTA visible without covering content.

FOOTER DESCRIPTION

ScaleSight helps growing consumer brands turn demand, inventory and incoming supply into reviewed recommendations on quantity, timing and cash.

FOOTER GROUPS

Service: How we work | 30-day pilot | Illustrative examples
Company: About | Partners (if active) | Contact
Legal: Privacy
Analysis maintained by ScaleSight. Decisions made with the client.

Wahib: Use one confirmed email in text and mailto. Keep Lahore, Pakistan if Arman wants it public. Do not add social links that have not been provided. All routes in this brief use no trailing slash; implement one canonical convention and redirect duplicates once.

Three intended journeys

Cold founder → hero → illustrative brief → pilot → enquiry.
Existing planning team → How we work → responsibilities/fit → enquiry.
Advisor → Partners → partner-specific enquiry.

07 / HOME / H01-H03

Lead with the commitment and the service

H01 / HERO EYEBROW

FOR GROWING CONSUMER BRANDS

CATEGORY LINE

CPG · BEVERAGES & RTD · DTC APPAREL

H1

Before the next PO, know what deserves the cash.

SUBHEAD

We connect demand, inventory and incoming supply to weekly, specialist-reviewed recommendations on quantity, timing and cash.

SUPPORT

Data science + supply-chain expertise, maintained for you. Your team decides.

BUTTONS

See an illustrative planning brief → /examples/#sample-brief
Explore the 30-day pilot → /30-day-planning-pilot

Wahib: Desktop: copy left, compact brief right. Mobile: headline, subhead, support, buttons, then brief. Use actual HTML text. Synthetic label must be visible without hover. Avoid a screenshot that becomes unreadable on a phone.

H02 / SECTION HEADING

A signal still leaves a decision to make.

Card title	Copy
A retail launch opens strongly	Is this opening stock or repeat demand - and what should change in the next run?
One flavor moves faster	Should total output increase, or should the mix change within existing capacity?
One channel is running short	Should you replenish, reallocate usable stock, or hold until the evidence improves?

H03 / HEADING

We maintain the analysis behind the next commitment.

FOUR STEPS

Agree the decision and inputs.
Investigate what changed and what may explain it.
Compare practical options against supply and cash constraints.
Bring your team a reviewed recommendation.

TEXT LINK

See how we work → /how-we-work

08 / HOME / H04-H06

Show the weekly output and who it helps

H04 / HEADING

A weekly brief built around the decision.

INTRO

See what changed, what we checked, and what the options mean before you commit.

Render the sample on page 10 with these six field labels: **What changed / What we checked / Recommended action / Quantity and timing / Cash and service trade-off / Assumptions and next signal.** Add review date and decision owner as supporting fields. “Reviewed recommendation” is a service output, not a guarantee that a recommendation is correct.

H05 / HEADING

More analytical capacity around the planning you have.

Card	Copy
For teams already planning	Add bandwidth around the exceptions, launches and commitments that need deeper investigation.
For lean teams building capability	Get maintained analysis and planning review without immediately building every capability internally.
For a specific specialist question	Scope a focused investigation around one decision, with clear inputs and limits.

OWNERSHIP LINE

We maintain the analysis and recommendations. Your team validates the operating constraints, makes the final call and executes.

H06 / HEADING

See the reasoning behind the recommendation.

DISCLOSURE

Illustrative examples using synthetic data. These are not client results.

CARDS

Supply timing and a promotion → /examples/#supply-timing
Launch demand and the next production mix → /examples/#launch-demand
Size-level demand and the next buy → /examples/#size-depth

Wahib: Use the question and a short decision output on each card. Do not use real-brand logos as a customer strip. Named demo links require the approval and verification rules on pages 16-17. The homepage cards can stay generic.

09 / HOME / H07-H09

Close the journey and specify the sample brief

H07 / PILOT BAND

Test the approach on one upcoming decision.
Choose a buy, production run or allocation decision and explore whether maintained analysis and review improve the process.
Explore the 30-day pilot → /30-day-planning-pilot

H08 / SHORT FAQ

Do we need to change systems?
We start with agreed inputs and your current planning context. The scope defines how data is shared and what analysis is maintained.

Who makes the final decision?
Your team does. ScaleSight investigates the evidence, compares options and brings a reviewed recommendation.

Do you work with teams that already have planners?
Yes. A focused engagement can add analytical bandwidth alongside your existing people and processes.

H09 / FINAL CTA

Have an upcoming commitment still open?
Bring us the choice you are weighing.
Talk through a planning decision → /contact

Reusable sample brief / synthetic content

Field	Illustrative content
Context	Synthetic beverage example. Next production slot: 12 November. Decision owner: Brand operations.
What changed	Flavor A sold 1,200 units over four weeks; B sold 800. B was unavailable for six days.
What we checked	Total sales, availability, repeat orders, incoming supply and shared run capacity. A faster observed rate alone does not establish incremental demand.
Recommended action	Investigate B availability before increasing total volume. Compare an unchanged total run with a revised mix.
Quantity and timing	Compare 6,000 units at 3,000 A / 3,000 B with 3,600 A / 2,400 B before the next slot is committed.
Cash and service	At an assumed $2 unit cost, both total $12,000 in product cost. Timing, packaging, freight and lost-sales risk still require review.
Assumptions / next signal	Synthetic figures; equal unit costs assumed. Recheck B after seven in-stock days and validate MOQ, committed stock and lead time.

Wahib: The example teaches comparison; it does not assert a preferred numeric buy. Display “Illustrative · synthetic data” above the brief. Avoid fabricated confidence scores, return claims or a fake specialist signature.

Explain the investigation, not a software setup

W01 / H1

From a demand signal to a decision your team can act on

INTRO

ScaleSight works with the data and planning context you already have. We investigate what changed, compare the available options, and bring your team a reviewed recommendation. The workspace supports the service; your team does not have another planning tool to operate.

HERO CTA

Talk through a planning decision → /contact

W02 / HEADING

Start with the commitment, then agree the inputs.

Step	Publishable copy
01 Choose the decision	Agree the upcoming buy, production, replenishment or allocation decision, the products and channels involved, the timing and the decision owner.
02 Agree the inputs	Start with relevant sales or sell-through, stock, open purchase orders, lead times and product definitions. Add returns, exchanges, promotions, costs or retailer data where the question needs them.
03 Investigate the signal	Check availability, promotions, seasonality, launches and channel changes. Use statistical or machine-learning methods where useful, with assumptions and limits visible.
04 Compare the options	Compare practical choices on quantity, timing or mix against supply constraints, service risk and cash exposure.
05 Review and recommend	Apply planning review and prepare a concise recommendation for your team to discuss and decide.
06 Maintain the work	Refresh the agreed analysis during the engagement and revisit the decisions when the evidence or constraints change.

W03 / HEADING

Forecasts create evidence. Planning review gives it context.

BODY

A demand estimate is one input. We also examine what is available, what is already committed, what can arrive in time and what each option requires from cash and capacity.

W04 / TEXT LINK

See an illustrative planning brief → /examples/#sample-brief

Inputs, responsibilities and useful limits

W05 / HEADING

Use the data that answers the question.

Input group	Customer-facing explanation
Demand	Sales and sell-through at the useful product, channel and time level. Separate opening orders from repeat demand where the data allows.
Stock and incoming supply	Available and committed stock, open purchase orders, arrival dates and relevant transfer constraints.
Operating constraints	Lead times, minimum order quantities, production slots, pack sizes and shelf life where relevant.
Commercial context	Promotions, launches, costs, returns or exchanges when they materially change the decision.

DATA ACCESS NOTE

We agree the data sources and access method during scoping. The analysis reflects the coverage and quality of the available inputs.

Wahib: Build anchor #inputs. Do not publish a native-integration logo wall, API promise or supported-platform checklist without verified capability. No customer data upload field belongs on the marketing site.

W06 / HEADING

A clear recommendation, with a clear owner.

BODY

ScaleSight maintains the agreed analysis, investigates exceptions, compares options and prepares the reviewed brief. Your team supplies operating context, validates constraints, chooses the action and executes through its own processes.

W07 / FAQ

Can you work alongside our planning system?
Yes. We scope the additional analysis around your existing process and the decision that needs attention.

Is every engagement machine learning?
No. The question, data and decision horizon determine which methods are useful.

What if the data is incomplete?
We identify the gaps, state the assumptions and agree whether a narrower investigation can still be useful.

Will you place orders for us?
Your team retains approval and execution of buys, production and allocation.

W08 / CTA

Have an upcoming inventory decision?
Talk it through with us. → /contact

12 / PILOT / P01-P03

Make the pilot a focused test

P01 / EYEBROW

30-DAY FOCUSED PLANNING PILOT

H1

Test the managed planning approach on one real decision.

INTRO

Choose one upcoming buy, production run or allocation decision. ScaleSight uses agreed inputs to investigate the signal, compare options and bring reviewed recommendations. At the end, decide whether ongoing review is useful enough to make recurring.

CTA

Talk through a planning decision → /contact?intent=pilot

P02 / HEADING

A useful starting point has a real commitment attached.

BODY

A strong pilot has a named decision owner, an upcoming commitment date, relevant data and a choice that remains open. It can support a lean team or add bandwidth around an established planning process.

FIT EXAMPLES

An upcoming production run with competing flavor signals.
A buying decision affected by size-level returns or availability.
A supply delay that changes allocation or promotion choices.

P03 / HEADING

Four weeks, one agreed decision scope.

Week	Copy / proposed delivery milestone
1 / Scope	Agree the decision, products, channels, owner, timing, inputs and constraints. Define how usefulness will be judged. Establish the first decision note and data-gap log.
2 / Establish the read	Prepare and check inputs, distinguish demand from availability effects, and document the baseline and assumptions. Review the first evidence-led read.
3 / Compare options	Investigate the change and compare feasible quantity, timing or mix choices against supply, service and cash constraints.
4 / Review and choose	Review the recommendation, remaining uncertainty and learning. Agree whether to stop, refine the scope or continue with recurring support.

Wahib: This schedule is a proposed operating plan, not proof that every data source can be ready in seven days. Arman must confirm cadence and delivery capacity. If the real decision deadline is earlier, scope against that deadline rather than silently promising this standard timetable.

Define deliverables and the evaluation

P04 / HEADING

What the pilot gives your team

DELIVERABLE CARDS

A decision-specific workspace
A shared view of the evidence, assumptions and alternatives for the agreed question.

Maintained analysis
Forecasts, demand checks and scenarios appropriate to the available data and decision.

Reviewed decision briefs
What changed, what we checked, the options, the recommended action and the cash and service implications.

A final review
A record of the findings, outstanding questions and whether continued support would be useful.

Wahib: Use one brief preview, not five product-dashboard panels. Weekly touchpoints may include scoping and data-quality updates; do not imply four mature forecast recommendations before the baseline exists. Arman confirms the exact number and format of briefs in scope.

P05 / HEADING

Who does what

ScaleSight	Your team
Frame the analytical question and organize agreed inputs.	Provide relevant data and explain operating constraints.
Investigate signals, compare options and document assumptions.	Validate lead times, costs, MOQs, commitments and practical feasibility.
Prepare and review recommendations within scope.	Review the trade-offs, make final decisions and execute.

P06 / HEADING

Judge the pilot by the decision it supports.

BODY

Did the analysis clarify the choice? Did it arrive before the commitment? Were the assumptions and trade-offs usable? Did it help the team decide what to change, hold or investigate? We quantify effects where the data supports them.

Wahib: Capture the agreed decision, evidence baseline and evaluation criteria in the statement of work. A one-month pilot may not contain a complete replenishment or production outcome cycle. Do not present avoided cost or improved sales as measured results without a defensible comparison.

14 / PILOT / P07-P09

Continuation, pricing and exact FAQ copy

P07 / HEADING

Continue when the review earns its place.

BODY

After the pilot, we review what was useful and what remains open. Any ongoing engagement has an agreed decision scope, review cadence and fee. Continued access and support are defined in that agreement.

P08 / FAQ

How long is the pilot?
The proposed pilot is 30 days. We agree the start date, decision deadline and data readiness before work begins.

What does it cost?
We confirm the fee after agreeing the decision, data requirements and review scope.

How much time will our team need?
We agree the onboarding and review time during scoping, based on the data and operating context.

Do we need Shopify?
No single sales platform defines fit. We first confirm whether the relevant data can support the question.

Do you replace our planner or analyst?
ScaleSight adds analytical planning capacity around an agreed scope. Your team retains operational ownership.

Do you guarantee savings or fewer stockouts?
We assess evidence and trade-offs. Business outcomes depend on demand, data quality, constraints and the decisions your team takes.

What happens if the data cannot support the question?
We review the limitation with you and agree whether to narrow the question or change the approach.

What happens after 30 days?
We review the work together. Continued analysis, support and workspace access require an agreed next scope.

P09 / CTA

Have a buy, run or allocation decision approaching?
Talk through a planning decision → /contact?intent=pilot

Wahib: Do not add “free trial,” “no contract,” cancellation rights, permanent handover or automatic continuation unless Arman supplies the actual terms. Publishable pricing copy above avoids inventing a fee while keeping the route to a scoped quote clear.

Show decision logic with honest disclosure

E01 / H1

See how a planning question becomes a decision.

INTRO / DISCLOSURE

These are illustrative workspaces built with synthetic data. They show how ScaleSight may structure an investigation. They are not client results or client operating data.

E02 / SAMPLE BRIEF HEADING

What a reviewed planning brief can contain

Wahib: Use anchor #sample-brief and the reusable synthetic brief from page 10. Keep all six fields visible in reading order. An optional “Show assumptions” disclosure must be keyboard accessible; essential caveats remain visible by default.

E03 / CARD 1 / ANCHOR #SUPPLY-TIMING

When supply timing changes, what should happen to the promotion?
CPG / supply timing
Evidence to examine: available stock, committed orders, revised arrival dates and expected promotion demand.
Options to compare: expedite eligible supply, split the receipt, reallocate usable stock or adjust the promotion.
Decision output: a timing recommendation with cash, service and feasibility trade-offs.
Open illustrative workspace

Candidate demo: https://scalesight-fishwife-demo.vercel.app/demand

Wahib: The supplied prompt links /demand, while earlier context identifies a PO Intervention view. Wahib must inspect the live app and use the actual decision view. Do not guess a new path. If no deep link exists, link the app root and state the exact navigation label after verifying it.

Public naming rule

Default marketing cards use generic scenario titles. Add “Illustrative concept for Fishwife / Alec’s / Understatement” only after Arman approves use of the real brand name and the public demo destination. A synthetic disclosure must appear on the card and in the destination. If destination labeling cannot be corrected, use the self-contained generic brief instead of publishing the link.

Production mix and size-depth examples

E04 / CARD 2 / ANCHOR #LAUNCH-DEMAND

Is the launch adding demand or shifting the flavor mix?
Food / launch demand
Evidence to examine: total portfolio sales, availability, opening fill, repeat orders and shared production capacity.
Options to compare: increase total output, change the mix within the planned run or hold until repeat demand is clearer.
Decision output: a next-run recommendation with component, capacity and cash implications.
Open illustrative workspace

Candidate demo: https://scalesight-alecs-demo.vercel.app/ | Supplied view: Launch Incrementality; verify live label.

E05 / CARD 3 / ANCHOR #SIZE-DEPTH

Which size demand should shape the next buy?
Apparel / size depth
Evidence to examine: sales by size, in-stock exposure, returns, exchanges and retained demand.
Options to compare: deepen selected sizes, rebalance the size curve or hold depth pending better evidence.
Decision output: a size-depth recommendation with lead-time, stock and cash trade-offs.
Open illustrative workspace

Candidate demo: https://scalesight-understatement-demo.vercel.app/ | Supplied context: Fit Movement → Size Depth; verify live labels.

E06 / SERVICE REMINDER

The workspace shows how the investigation may be structured. In an engagement, ScaleSight maintains the agreed analysis and brings a reviewed recommendation. Your team makes the final decision.

E07 / CTA

Bring us a planning question.
Talk through a planning decision → /contact?intent=planning

Wahib: Each example uses the same order: question → evidence → options → output → disclosure → external link. Add descriptive link names for assistive technology. If opening a new tab, signal it and apply rel="noopener noreferrer". Verify links in the production build. No results badges, client testimonials or customer-logo treatment.

17 / ABOUT / A01-A05

Explain why ScaleSight exists

A01 / H1

I started ScaleSight to make deeper planning analysis useful before a brand commits more cash.

A02 / FOUNDER NARRATIVE

I’m Arman, a data scientist. In consumer brands, a forecast is only one input to a much larger decision: what to buy or produce, how much, when, and what the choice means for cash and availability.

ScaleSight brings data-science analysis and supply-chain review together around the commitments a brand has to make. We work from agreed sales, inventory, incoming supply and lead-time data, investigate changing demand, and compare the options. We maintain the analysis and bring the team a clear recommendation; the team keeps the final call.

Larger brands often hire planners, analysts and data-science specialists around their systems. ScaleSight gives growing brands access to analytical support without building every capability internally. For lean teams, that adds planning capability. For established teams, it adds bandwidth around a defined investigation.

A03 / PRINCIPLES

Start with the decision.
Make the assumptions visible.
Check supply and cash consequences.
Keep ownership with the client.

A04 / ROLE CAPTION

Arman Mehdi
Founder, ScaleSight | Data scientist

A05 / CTA

What commitment is your team weighing next?
Talk through a planning decision → /contact

Wahib: Use a supplied real founder portrait. Do not generate a fictional team image. If no approved photo is available, use a typography-led founder block. Only publish approved credentials and links. Do not import Fiverr earnings, project counts or unrelated client names without evidence and permission.

Wahib: The supply-chain review promise requires an identified delivery capability and operating responsibility, confirmed by Arman. Do not invent named specialists, certifications, experience duration or client logos. Remove the current internal positioning quotation rather than turning it into a testimonial.

Keep the page only if the channel is active

R01 / H1

Add analytical planning capacity to the work you already lead.

INTRO

ScaleSight can support an advisor’s client with scoped demand, inventory and supply analysis, reviewed recommendations and a decision brief. We agree the roles and working arrangement before delivery begins.

R02 / HEADING

For advisors working around real inventory commitments

BODY

A focused engagement may support fractional operations leaders, supply-chain advisors or systems consultants when a client needs additional analytical capacity around a buying, production or allocation decision.

R03 / HEADING

A clear division of work

BODY

You contribute the client context and agreed advisory role. ScaleSight maintains the scoped investigation and decision brief. Client relationship ownership, meeting participation and recommendation review are defined together.

R04 / PROCESS

Agree a suitable decision and client.
Define roles, data access, fees and visibility.
Scope the investigation and outputs.
Review the recommendation with the agreed stakeholders.

R05 / BOUNDARIES

Delivery is scoped to the client and decision. Referral terms, branded delivery, confidentiality and continued support are agreed separately.

R06 / CTA

Discuss a partner engagement → /contact?intent=partner

Wahib: Do not publish fixed commissions, white-label rights, exclusivity, continuous monitoring, agency margins or implied automatic access to a partner’s client data. Keep Partners out of the primary header.

If Arman does not retain the channel

Remove Partners from navigation and footer. After checking actual traffic and indexed routes, use a single permanent redirect from /partners to /contact?intent=partner with a relevant enquiry heading, or retain a concise partner contact page. Do not leave the old claims live merely because the page is no longer linked.

19 / CONTACT / C01-C05

Make the enquiry about the decision

C01 / H1

Bring us the decision you're weighing.

INTRO

Tell us what you're buying, producing or allocating next. A short conversation will determine whether a focused planning review fits.

C02 / WHAT TO EXPECT

Discuss the commitment and timing.
Check the relevant data and operating context.
Agree whether a focused pilot is a useful next step.

C03 / FORM INSTRUCTION

Start with a few details. After sending your enquiry, you can choose a time for a 30-minute conversation.

Field / required?	Label, placeholder and behavior
name / yes	Name | e.g. Sam Lee | autocomplete=name
email / yes	Work email | e.g. sam@brand.com | type=email; allow valid personal domains
brand / yes	Brand or company | e.g. Your brand | autocomplete=organization
website / no	Website | e.g. brand.com | normalize https after validation
role / no	Your role | e.g. Founder or Operations lead
channels / no	Sales channels | DTC / Retail / Wholesale / Marketplace / Other; multi-select
decision / no	What decision is coming up? | e.g. Next production run, timing and the choice you are weighing.
intent / hidden	planning, pilot or partner from a validated query value; default planning.

SUBMIT BUTTON

Send planning enquiry

PRIVACY MICROCOPY

We use these details to respond to your enquiry. Read our Privacy Notice.

C04 / BOOKING BUTTON AFTER SUCCESS

Choose a 30-minute conversation

C05 / DIRECT CONTACT LABEL

Prefer email? Contact us directly.

Wahib: Keep monthly revenue out of the default form. If Arman requests it, add an optional band with "Prefer not to say." Do not require confidential spreadsheets or inventory figures. Partner intent changes Brand label to "Company" and decision label to "What support does your client need?" Preserve the same validation and delivery flow.

Success, failure and booking must be distinct

State	Required behavior / exact user text
Idle	Labels remain visible; indicate required fields. Keyboard order follows visual order.
Invalid field	Place specific inline errors beside the field and an error summary above the form. Example: “Enter a valid email address.” Keep entered values.
Submitting	Button: “Sending…”; block duplicate sends, keep focus stable and announce status.
Server confirms enquiry saved	“Thanks - your enquiry has been received. You can now choose a time for a conversation.” Show booking button and confirmed direct email.
Delivery failed	“We could not send your enquiry. Please try again or email us directly.” Keep values; do not show success or open calendar.
Calendar unavailable / blocked	“Your enquiry has been received. The booking calendar is unavailable here. Open the booking page or email us to arrange a time.”
Meeting confirmed	Only show “Meeting booked” after a verified booking confirmation. Opening a calendar is not a booking.

Implementation requirements

• Use a real server-side submission endpoint or verified existing form provider. Validate and sanitize server-side; add rate limiting or a honeypot. Keep credentials outside browser bundles.

• Persist the enquiry or obtain provider acceptance before displaying success. Agree the delivery inbox and failure logging with Arman. Test using an approved test address on staging.

• Calendly should load only when needed; always provide a normal booking link. Avoid automatic pop-ups after an asynchronous request, which browsers may block.

• Use one source of configuration for email text, mailto, notification destination and calendar URL. Do not copy the conflicting live email values into code.

• Associate errors with controls, announce status, use real labels and suitable autocomplete. Privacy notice must describe actual form/booking providers and handling.

Wahib: Direct HTML confirms the email link is mailto:hello@scalesight.io while the visible address is arman@scalesight.org. The current page presents a 30-minute call; retain that duration only after verifying the configured event. This brief does not claim the existing form delivers mail. Wahib must prove the new complete journey on staging.

A service-led design using the existing identity

Preserve and refine

Retain the ScaleSight logo and existing navy/blue direction. Use #4F49F3 as the accent from the supplied prompt, subject to brand approval. Extract the actual existing font and color tokens from the project. Do not invent a full rebrand or purchase fonts.

Element	Build specification
Layout	Maximum content width 1180px; 24px desktop gutters and 16-20px mobile gutters. Use a clear 8px spacing rhythm.
Typography	Desktop H1 about 48-60px, mobile 34-40px; body 16-18px with comfortable line height. Text lines around 60-75 characters. Adjust to the real typeface.
Color	Navy structural surfaces; light reading sections where useful; blue for key actions. Test actual text/surface pairs rather than assuming accent contrast passes.
Hero	One decision brief as the focal visual. Avoid floating dashboards, generic AI art, robot icons and fake live status.
Cards	Question-first titles; concise evidence and output. No auto-rotating carousels or essential content hidden behind hover.
Buttons	One dominant action per section. Secondary action is outlined or text. Minimum proposed target size 44x44px.
Motion	Subtle transitions only; honor prefers-reduced-motion. Do not require motion to understand the service.
Responsive	Test 360, 390, 768, 1024 and 1440px. Stack brief rows and cards; no horizontal page overflow or unreadable scaled screenshots.

Accessibility acceptance

Target WCAG 2.2 AA for implemented templates: semantic landmarks, a single logical H1, ordered headings, keyboard navigation, visible focus, skip link, descriptive links, meaningful image alternatives and accessible errors. Text contrast at least 4.5:1 for normal text and 3:1 for qualifying large text. Manual checks supplement automated audits; do not claim certification.

Build once, reuse consistently

Component	Required content / behavior
SiteHeader / SiteFooter	Shared navigation, active state, accessible mobile menu, configured contact identity.
Hero / CTABand	Eyebrow, heading, body, one primary and optional secondary CTA.
DecisionBrief	Disclosure, context, six named fields, date/owner, assumptions. Same data object across Home and Examples.
DecisionCard / ExampleCard	Question, evidence, options, output, disclosure, destination; approved demo flag.
ProcessSteps / ResponsibilityGrid	Stable reading order; no essential content in images.
FAQAccordion	Accessible button states and keyboard behavior; answers remain indexable.
ContactForm / BookingPanel	Validated intent, delivery states, independent booking state and fallback.

Metadata specification

Route	Title / proposed meta description
/	ScaleSight | Managed Planning for Consumer Brands Maintained demand, inventory and supply analysis with reviewed recommendations on quantity, timing and cash. Explore a focused planning pilot.
/how-we-work	How ScaleSight Works | Managed Planning See how ScaleSight investigates demand signals, compares practical options and brings your team a reviewed planning recommendation.
/30-day-planning-pilot	30-Day Planning Pilot | ScaleSight Test managed analytical planning on one upcoming buy, production run or allocation decision with an agreed scope and review process.
/examples	Illustrative Planning Examples | ScaleSight Explore synthetic examples of supply timing, launch demand and size-depth decisions. See the evidence and trade-offs behind a planning brief.
/about	About ScaleSight | Analysis Behind the Commitment Meet the founder and understand how ScaleSight connects data-science analysis with planning review for growing consumer brands.
/partners	Partner with ScaleSight | Analytical Planning Support Discuss scoped planning analysis and decision support for consumer-brand clients, with clear roles and delivery boundaries.
/contact	Discuss a Planning Decision | ScaleSight Tell us the buy, production or allocation choice your team is weighing and explore whether a focused planning review fits.

Implementation sequence and migration rules

Phase 1 / Confirm strategy and scope

Arman signs off the positioning, page order, service cadence, pilot terms and approval register. Wahib inventories the repo/CMS, routes, redirects, current form/calendar configuration, metadata and asset ownership. Produce a URL map before changing paths. Preserve the existing stack unless a documented blocker warrants a separate decision.

Phase 2A / Design the two defining components

Design Home H01 and the reusable brief at desktop and mobile widths. Validate that a founder can identify the service, output and next action. Then apply the approved type, spacing, cards and CTA treatment to the remaining templates.

Phase 2B / Build complete staging

Implement shared shell and configuration, all page copy, examples, new routes, contact handling, booking fallback, metadata and redirects. Keep staging access-controlled or noindex, out of the production sitemap, and separate from production analytics. Do not submit staging URLs for indexing.

Phase 2C / QA and handoff

Run the checks on page 25. Deliver staging URL, route inventory, redirect list, test evidence, asset/source notes and a short guide for updating copy, briefs and demo links. Obtain Arman’s production approval after he can inspect the complete result.

Canonical and redirect rules

• Retain /30-day-planning-pilot, /about and /contact. Do not create duplicate replacement URLs for these pages.

• Normalize HTTPS, www/non-www and slash convention to the existing preferred host after inspecting current canonical configuration. Avoid redirect chains.

• Replace footer Inventory Planning and Revenue Forecasting labels with real Service links. If actual legacy URLs exist, map them to /how-we-work#inputs or the closest relevant section after route inventory; do not assume they exist.

• Create sitemap entries for approved public pages and accurate canonical/OG tags. Use Organization/Service structured data only for visible, verified facts; no invented reviews.

• Confirm or create an owner-approved privacy page before activating the form and analytics. Retain any other live policy pages found in inventory.

What Wahib must demonstrate before launch

Area	Pass condition
Positioning	Every page describes maintained analysis and reviewed recommendations. No leftover Shopify-only qualification, software handover or guaranteed outcome promises.
Completeness	All H/W/P/E/A/R/C sections implemented in order; optional Partners decision resolved; no placeholders on public pages.
Links	Every header, footer, CTA, anchor, mailto and demo tested from production build. Direct URL refresh works. Redirects are single-hop and relevant.
Forms	Required-field, invalid-email, duplicate-send, server-failure, success, inbox delivery and calendar-fallback scenarios demonstrated. No live sales enquiry submitted without permission.
Examples	Synthetic label on cards, brief and destination; no implied customer relationship. Unverified named links withheld.
Accessibility	Keyboard-only journey, menu, accordion, form errors, focus, screen-reader labels and 200% zoom checked. No critical automated findings left unresolved.
Devices	No clipping/overlap at specified widths; test current Chrome, Safari and Firefox and at least one real mobile browser.
Performance	Target LCP ≤2.5s, INP ≤200ms and CLS ≤0.1 at the 75th percentile when field data exists. Record lab results before launch; do not claim field performance from Lighthouse alone.
Release	Backup/version tag, configuration record, approved launch, then smoke-test routes/form/canonical/sitemap. Roll back if enquiries or critical routes fail.

Measurement / implement only after owner approval

Proposed events: example_open, pilot_cta_click, contact_form_start, contact_submit_success and booking_link_click. A booking_completed event requires a reliable provider confirmation. Record route, CTA location and generic example ID; never send form text, name or email to analytics. Separate genuine submissions from staging tests and spam. Start with qualified enquiries and conversations; no invented conversion target before a baseline exists.

Performance source: Google Web Vitals [S8]. Form interaction source: W3C WAI [S7]. These are targets for the new build, not measured findings about the existing website.

Resolve these facts without blocking staging work

Item / owner	Proposed default and publication gate
Service scope / Arman	Weekly managed analysis and specialist review. Confirm who performs review, active capacity, products/channels, refresh and meeting cadence before publishing promises.
Pilot / Arman	One decision over 30 days. Confirm fee, data readiness rules, brief count, meetings, start/end definition and what happens if data is late.
Recurring terms / Arman	No public price table. $2,000/month is internal scoped offer context, not the pilot price. Confirm continuation scope, access and exclusions.
Data access / Arman + Wahib	Use “agreed inputs.” Verify implemented export/API methods, actual controls and provider handling before stating any specifics.
Contact / Arman + Wahib	Confirm one inbox and mailto target. Live text contains arman@scalesight.org and hello@scalesight.io. Do not choose silently. Verify Calendly URL, duration and fallback.
Examples / Arman + Wahib	Use generic cards and synthetic brief by default. Approve public real-brand naming; verify actual demo screens, deep links and destination disclosures.
Partners / Arman	Keep conditional staging page. Confirm active referral channel and relationship terms or approve route retirement.
Brand / Arman	Approve existing logo/font tokens, #4F49F3 use, portrait and founder caption. No fictional staff or proof.
Privacy / Arman + Wahib	Approve an accurate notice describing actual form/calendar/analytics providers and handling. No certification or security promises by assumption.
Analytics / Arman	Confirm provider, event plan and appropriate consent behavior before activation.
Production / Arman	Approve the complete staging build and resolved register before deployment.

Wahib can proceed now

Build the route structure, copy layouts, shared components, generic synthetic brief, responsive styles and form states on staging. Keep unresolved values in configuration or a private issue list. Hide unapproved features rather than putting “TBC” into public copy.

Research trail and source notes

All website sources accessed 17 October 2026. Findings are from retrieved public text, direct HTML, sitemap and link destinations, not visual browser QA or a successful transaction test. This brief’s proposed copy and build choices are recommendations, not claims about existing implementation.
